

```
from transformers import pipeline
```

```
generator= pipeline("text-generation",model="gpt2")
```

```
prompt= "ai is brilliant and"
```

```
result = generator(prompt,max_length=60,num_return_sequences=1)
```

```
print(result[0]["generated_text"])
```

Device set to use cpu

Truncation was not explicitly activated but `max\_length` is provided a specific value, please use `truncation=True` to explicitly truncate examples to max length. Defaulting to 'longest_first' truncation strategy. If you encode pairs of sequences (GLUE-style) with the tokenizer you can select this strategy more precisely by providing a specific strategy to `truncation`.

Setting `pad\_token\_id` to `eos\_token\_id`:50256 for open-end generation.

Both `max\_new\_tokens` (=256) and `max\_length` (=60) seem to have been set. `max\_new\_tokens` will take precedence. Please refer to the documentation for more information.

(https://huggingface.co/docs/transformers/main/en/main_classes/text_generation)

ai is brilliant and fun. It's a great story about love in a time of conflict, and it gives you the chance to see the love in your own heart.

WARNING:torchao.kernel.intmm:Warning: Detected no triton, on systems without Triton certain kernels will not work

```
processor = BlipProcessor.from_pretrained("Salesforce/blip-image-
captioning-base")
```

Using a slow image processor as `use\_fast` is unset and a slow processor was saved with this model. `use\_fast=True` will be the default behavior in v4.52, even if the model was saved with a slow processor. This will result in minor differences in outputs. You'll still be able to use a slow processor with `use\_fast=False`.
